

Company

The major civil and military aircraft manufacturers and aerospace equipment manufacturers suppliers have been working with STAINLESS FRANCE since the 1950s.

STAINLESS supplies them with copper alloys (CuBe2 and ToughMet® in particular), special alloys and stainless steel bars. These materials, which meet the most stringent aerospace standards and customer specifications, are used in friction rings for all types of structural joints (landing gear, flaps and leading edges, actuators, doors, etc.), in small mechanical parts, in honeycombs for heat exchangers or in other engine parts.

Supported by a network of leading manufacturing partners, the reliability of its service, its uncompromising product quality and traceability policies, and its ability to offer new products, make STAINLESS a recognised partner.

Our technical department is constantly on the lookout for innovations to meet the changing needs of our customers.

The powerful combination of our dedicated aerospace stock and our international logistics enables us to offer a personalised, fast and efficient service.

**Close to you,
everywhere in the world**

Supporting High-tech industries since 1928

- Optimal responsiveness
- Adapted stock specific to the aerospace sector making it possible to deliver on available stocks, whatever the volume
- Quality and traceability
- Additional services (Sawing – chamfering – customised stock management, ...)
- Technical support / metallurgical analysis laboratory
- International logistics organisation for fast and effective local service

High performance Aerospace materials

Services center

Stainless combines the performance and quality of its materials with recognised logistical expertise to provide a sustainable response to the most innovating markets global technological challenges.

As a true partner of the world's leading manufacturers, we bring our added value by processing these materials using our wide range of technologies and processes.

CUSTOMIZED STOCK MANAGEMENT

Consignment stock dedicated stock with delivery on request.

SAWING

Sawing of blocks, bars, tubes
CNC multi-bars/tubes sawing centre for aerospace and industry

CHAMFERING / ENGRAVING / GRINDING

METALLURGICAL ANALYSIS LABORATORY

A new 40m² expertise laboratory equipped with a wide range of equipment to support all customers in their new developments

CONSULTING METALLURGIC TRAINING INSTITUTE
